Maintenance Guidelines

Vacuuming is the most important cleansing procedure. Effective Vacuuming Prevents soil from spreading through the carpet.

Correct and regular maintenance will increase the lifespan of a carpet and also help to maintain ins appearance. Cleansing should be proportional to the amount of soiling to which the carpet is subjected. A clean carpet is along wearing carper, therefore you cannot vacuum it too much.

If using an upright vacuum cleaner with rotating beater branded brush, ensure that it is higher setting to reduce possible fuzz.

Rearranging furniture periodically changes the traffic pattern, allowing the carpet to wear more evenly.

Technically carpet pigment have never been better, but colors can fade. If possible, the carpet should be protected from intense, direct sunlight.

To reduce soiling and wear in high traffic area, place walk-off mats at all entrance. These must be cleaned and rotated regularly.
