HYBRID LAMINATE FLOORING

What is Hybrid Laminate Flooring ?

Hybrid laminate flooring, also known as rigid core flooring, ESCT which is a black core HDF (high-density fiberboard). This makes the product super water-resistant which combines the best qualities and features of a laminate and real wood floor. It is made up of several layers, including a high-density fiberboard waterproof (HDF) core, a high definition printed decor layer protected with an AC5 category scratch proof top layer and a wear layer.

The black core HDF is a high-density fiberboard that provides excellent durability and stability to the flooring. The HDF is impregnated with resins, carbon fibre and other materials to make it more resistant to moisture and humidity. The HDF core provides stability and durability, while the printed decor layer gives the flooring its appearance, which can be designed to mimic the look of high grade real wood. The wear layer on top of the decor layer helps to protect the flooring from scratches, stains, and other types of damage.

The super water-resistant feature of the hybrid laminate flooring is achieved through a combination of technologies such as water-resistant coatings, water-repellent joints, and a tight locking system that prevents water from seeping through the seams of the planks.

Overall, hybrid laminate flooring with a black core HDF and super water-resistant feature is an excellent choice for high-traffic areas such as living rooms, bedrooms, kitchens, bathrooms, and basements, where moisture and spills are common. It provides the beauty and warmth of hardwood flooring while offering the durability, versatility, and water resistance of any kind of other materials which can be used as flooring.

The Foundation of Unmatched Durability and Stability

A revolutionary advancement in flooring technology that proffer exceptional durability and performance. The coreboard used is made up of layers of high-density fibers that are tightly compressed together, creating a dense and sturdy foundation. Additionally, an innovative moisture defense layer is incorporated into the flooring, which provides an extra layer of protection against moisture intrusion. This layer is specifically designed to prevent water from seeping into the coreboard, which can lead to warping, swelling, and damage to the flooring over time.

ESCT
ORGANIC RIGID COREBOARD ANTISTATIC
MOISTURE DEFENSE TECHNOLOGY

Moisture Defence Technology: your floors' shield against the elements

The technology utilizes a combination of innovative materials and engineering to create a durable, waterproof barrier that can withstand even the most challenging environments.This innovative technology acts as a shield against moisture and other liquids, preventing damage to your flooring caused by spills, accidents, and everyday wear and tear, especially in homes with kids and pets.

Your Floors' Shield Against Accidents and Wear & Tear

Moisture Defence Technology in floors acts as a formidable barrier, safeguarding against accidents and wear and tear, crucial for households with kids and pets. This innovative feature creates a protective shield, preventing moisture penetration and potential hazards. It enhances safety, making the floor more durable, and ensures a secure environment for families. It's a smart choice for homes with active lifestyles, promoting longevity for flooring materials.

What Our Customers Say

Real Stories, Real Satisfaction

Ayesha Kapoor
Business Analyst

Immenso Hybrid Laminated Flooring went beyond my expectations. Huge thanks to Lamiwood Floors for their expert installation, giving my home a stylish makeover. Their attention to detail and professionalism made the whole process smooth.

Raj Singhania
Software Engineer

I absolutely love my Immenso Hybrid Laminated Flooring. It's top-notch in quality and looks fantastic. Huge shoutout to Lamiwood Floors for their flawless installation that completely transformed my space.
